

Reflex Achieves ISO 27001 Certification, Strengthening Our Commitment to Data Security

Reflex is proud to announce that we have officially achieved ISO 27001 certification, the globally recognised standard for information security management. This milestone reflects our ongoing commitment to protecting client data, reducing risk, and maintaining the highest levels of operational integrity across our business.

ISO 27001 sets the benchmark for how organisations manage information security. Achieving this certification means that Reflex has implemented a rigorous Information Security Management System (ISMS), supported by audited policies, controls, and processes that safeguard information at every level. From how we manage our network infrastructure to how we support clients; security is built into everything we do.

What This Means for Our Clients

For businesses that rely on Reflex, ISO 27001 offers assurance that their data, systems, and services are protected by industry-leading standards. This certification validates that:

- We continuously identify and assess security risks.
- We apply strict controls to protect sensitive information.
- We have structured incident response, continuity and recovery plans.
- Our teams follow consistent, audited security procedures.
- We maintain a culture where security is everyone's responsibility.

ISO 27001 reinforces the trust our clients place in us, ensuring they benefit from a secure, reliable, and resilient environment, whether they use Reflex for managed services, connectivity, cloud, carrier solutions, or enterprise support.

A Commitment That Extends Beyond Compliance

For Reflex, this certification isn't a checkbox exercise. It's part of a broader commitment to operational excellence and continuous improvement. The journey to ISO 27001 strengthened our internal alignment, enhanced our governance, and embedded security into our day-to-day operations.

As cyber risks continue to evolve, Reflex remains focused on delivering solutions that are secure by design, offering businesses the peace of mind they deserve.

Looking Ahead

ISO 27001 is a significant milestone, but it's only the foundation. Reflex will continue investing in security, infrastructure, and innovation to ensure we remain a trusted partner for organisations across South Africa and beyond.
